

Mai Mohamed Abdel Lataif Sayed

She is using project based study method in teaching – learning. She is doing various projects with her students and her various projects are: A project “My Village Right – I am well” is to prevent snakes in desert and plantations and through teams of students through the villages to raise awareness.

Second project based on the water awareness and how to preserve it with latest technologies. Third major project is related to renal failure and how to prevent it and meals that should not be taken. Her students designed a game for children to raise awareness and reduce this disease. She has prepared several exercises for students and teachers on the use of augmented reality and also use of environmental material. She was given the title of ambassador from the US Company Merge. She facilitated her students to design virtual reality glasses. Her students also designed more than one project using coding, a website. Her teaching goes beyond the four walls and she with her students participated in attracting tourists to her country and won admiration of the Tourists Promotion Authority and Egyptian Ministry of Antiquities. He enabled her students to participate in largest global event on the use of Augmented Reality Online among experts from all over world. She taught girls about programming by participating in a global event (code week).She travelled into the backward villages far from the city more than 65 Km to teach the girls about the use of technologies and augmented reality. The Deputy Governor visited her school to witness the first experience in using Augmented Reality in educational process. Her students participated in global project – No More Plastic and they get certificate for it. She has many awards to her credit for her outstanding contribution in education and society in various ways.
